BHAT FOUNDATION WELFARE SOCIETY

PROJECT / EVENT COMPLETION & IMPACT REPORT

FREE SPINE & CARDIOLOGY MEDICAL CAMP

Work Done, Beneficiary Reach & Community Impact Report

18 JULY 2026 | IBN SINA HOSPITAL, BUDGAM

300 PATIENTS SERVED • 50% INVESTIGATION DISCOUNT

1. Executive Summary

A concise record of the intervention, reach, services and documented evidence.

The Free Spine & Cardiology Medical Camp held on 18 July 2026 was a community-oriented healthcare intervention focused on improving access to specialty medical consultation for people requiring spine and cardiac-related clinical attention. The camp reached **300 patients** and included a **50% discount on investigations**, providing a direct cost concession for beneficiaries requiring eligible diagnostic investigations.

The event was implemented at **Ibn Sina Hospital, Budgam**, with the available photographic documentation showing patient registration/waiting areas, consultation activity, medical personnel, and movement of beneficiaries through the hospital's clinical spaces. The report records only the quantitative and service details supplied for the event and the activities visibly supported by the photographs.

300	50%	18 JUL	2
PATIENTS REACHED	INVESTIGATION DISCOUNT	EVENT DATE	SPECIALTY AREAS

Impact at a Glance

- Specialty access: Spine and cardiology-focused medical services were brought together in a single community camp.
- Financial access: A 50% discount on investigations reduced the stated investigation cost for beneficiaries using the concession.
- Patient reach: 300 patients were reported as beneficiaries of the camp.
- Service environment: Photographs document a functioning clinical setting with patients waiting, consulting clinicians and being supported by medical/hospital personnel.
- Evidence base: The report is supported by event photographs and the event facts supplied for preparation of this report.

2. Project Snapshot

Event	Free Spine & Cardiology Medical Camp
Date	18 July 2026
Organising Organisation	Bhat Foundation Welfare Society
Clinical / Venue Partner	Ibn Sina Hospital, Budgam
Primary Service Areas	Spine care and cardiology
Reported Beneficiary Reach	300 patients
Investigation Support	50% discount on investigations
Format	Community medical camp / specialty consultation and investigation support

3. Background & Community Need

Access to timely specialty consultation can be difficult for community members when specialist services, hospital visits and diagnostic investigations create financial or logistical barriers. The camp model provides a structured opportunity to connect beneficiaries with clinical services within a defined period and at a lower immediate cost for eligible investigations.

For this event, the intervention was centred on two clinically important areas—spine care and cardiology. The stated 50% investigation discount added a financial-access component to the medical-camp model, while the reported reach of 300 patients demonstrates substantial community participation.

4. Objectives

- Facilitate access to spine-focused medical consultation within a community camp setting.
- Facilitate access to cardiology-focused medical consultation within the same intervention.
- Provide beneficiaries with an opportunity to seek clinical assessment and medical guidance.
- Reduce the immediate financial barrier associated with eligible investigations through a 50% discount.
- Create an organised patient-care pathway covering arrival, waiting, consultation and onward clinical guidance.
- Document the completed intervention for organisational records, donor/CSR reporting and future programme planning.

5. Implementation Methodology / Work Process

The photographic record indicates a hospital-based patient flow involving waiting/registration, movement through clinical corridors, interaction with medical personnel and consultation spaces. The work process below reflects the documented event structure without adding unverified operational figures.

STEP	WORKSTREAM	WORK DONE
1	**Patient mobilisation & arrival**	Beneficiaries arrived at the hospital and were accommodated within the designated patient areas.
2	**Registration / waiting**	Patients and attendants were visible carrying documents and waiting for clinical attention.
3	**Specialty consultation**	Clinical interaction between beneficiaries and medical personnel was documented in consultation areas.
4	**Investigation access**	Eligible investigations were offered with the stated 50% discount.
5	**Clinical guidance / onward care**	Beneficiaries were supported through the hospital's clinical pathway after assessment.

STEP	WORKSTREAM	WORK DONE
6	**Documentation**	Photographs were captured as evidence of patient participation, service delivery and the operational environment.

6. Beneficiary Profile & Reach

Reported beneficiaries: 300 patients.

The available information confirms the total patient reach but does not provide a verified age-wise, gender-wise, locality-wise or diagnosis-wise breakdown. Accordingly, this report does not manufacture demographic or clinical disaggregation.

300	50%
TOTAL PATIENTS REPORTED	INVESTIGATION CONCESSION

Verified beneficiary information available for this report:

- Total patient reach: 300.
- Service focus: spine and cardiology.
- Investigation concession: 50% discount.
- Venue: Ibn Sina Hospital, Budgam.

7. Detailed Work Done

7.1 Community Medical Access

The camp created a dedicated opportunity for beneficiaries to seek specialty medical attention through a single organised intervention. The documented hospital setting shows a significant patient flow and structured access to clinical personnel.

7.2 Spine Care Services

Spine-related consultation formed one of the two stated specialty components of the camp. The service objective was to enable beneficiaries with spine-related concerns to access clinical assessment and professional medical guidance.

7.3 Cardiology Services

Cardiology formed the second stated specialty component. The camp therefore addressed an important area of adult health requiring timely professional assessment and, where clinically indicated, further investigation.

7.4 Investigation Support

A 50% discount on investigations was made available as part of the camp. This constituted a direct financial concession on eligible investigations and strengthened the affordability component of the intervention.

7.5 Patient Facilitation

Photographs document patients and attendants waiting in hospital areas, staff/medical personnel moving through the service areas, and beneficiaries engaging with clinical personnel. These records support the conclusion that patient facilitation and clinical movement were active components of the event.

7.6 Documentation & Accountability

Photographic evidence was collected across different areas of the hospital, including waiting spaces and consultation rooms. This provides an auditable visual record of beneficiary presence and service delivery conditions on the event day.

8. Outputs Dashboard

INDICATOR	REPORTED / DOCUMENTED	EVIDENCE STATUS	REPORTING NOTE
Patients reached	300	User-provided event figure	Primary reach metric
Specialty focus	Spine + Cardiology	User-provided event detail	Two service areas
Investigation concession	50% discount	User-provided event detail	Financial access measure
Patient waiting / registration	Visible in photographs	Photo evidence	Multiple hospital areas documented
Clinical consultation	Visible in photographs	Photo evidence	Beneficiary–clinician interaction documented
Hospital-based delivery	Visible in photographs	Photo evidence	Ibn Sina Hospital signage and clinical spaces visible

9. Outcomes & Community Impact

The strongest verified outcome measure available is the reported reach of 300 patients. The intervention also incorporated a 50% investigation discount, creating a measurable affordability feature. Photographs further demonstrate that beneficiaries were physically present in the hospital service environment and engaged with clinical personnel.

Documented / supportable impact statements:

- 300 patients were reached through the specialty medical camp.
- Beneficiaries were provided access to two stated specialty areas: spine care and cardiology.
- Eligible investigations were made available at a 50% discounted rate.
- The photographic record demonstrates active patient participation and clinical consultation activity.
- The camp provided a structured community-health access point within a hospital setting.

Clinical outcomes such as diagnoses made, treatment changes, procedures advised, referrals completed, investigations performed, or follow-up compliance are not quantified in the supplied information and are therefore not presented as measured outcomes.

10. Before → Intervention → Result

BEFORE / ACCESS BARRIER	INTERVENTION	DOCUMENTED RESULT
Need for specialty assessment	Free community medical camp focused on spine and cardiology	300 patients reached
Potential cost barrier for investigations	50% discount on eligible investigations	Direct investigation cost concession
Need for organised access to clinical services	Hospital-based patient flow, waiting and consultation pathway	Photographic evidence of active service delivery

11. Partnership & Stakeholder Contribution

The event was delivered in a hospital-based setting at Ibn Sina Hospital, Budgam, with the programme framed as a Bhat Foundation Welfare Society community-health intervention. The photographic record visibly documents the hospital environment and medical personnel.

STAKEHOLDER	ROLE IN THE EVENT	EVIDENCE / BASIS
Bhat Foundation Welfare Society	Community programme / beneficiary-focused intervention	Event brief supplied by the organisation
Ibn Sina Hospital, Budgam	Hospital-based clinical setting and service delivery environment	Hospital signage and clinical spaces visible in photographs
Medical / support personnel	Patient consultation and service facilitation	Visible in event photographs
Beneficiaries & attendants	Participation and utilisation of the camp	Visible patient attendance across photographs

12. Resource & Service-Value Analysis

No event budget, donor contribution, number of clinicians, number of investigations performed, or monetary value of the waived/discounted services was supplied for this report. Therefore, the financial section records the verified service concession without assigning an unsupported rupee value.

300	50%	₹ —
PATIENT REACH	INVESTIGATION DISCOUNT	FINANCIAL VALUE NOT PROVIDED

For a complete donor/CSR financial annexure, the following figures can be inserted when available:

- Total programme expenditure [INFORMATION REQUIRED]
- Value of investigation discounts provided [INFORMATION REQUIRED]
- Partner in-kind contribution [INFORMATION REQUIRED]
- Medical personnel / volunteer hours [INFORMATION REQUIRED]
- Cost per beneficiary [INFORMATION REQUIRED]

13. SDG & CSR Alignment

Based on the nature of the intervention, the camp is directly relevant to health and well-being objectives. The following alignment is descriptive rather than a claim of formal certification or donor classification.

FRAMEWORK	RELEVANCE	EVENT CONTRIBUTION
SDG 3 – Good Health & Well-being	Direct relevance	Improved access to specialty health consultation and investigation support.
Inclusive community health	Direct relevance	Community members received access to a specialty-focused medical camp.
CSR – Healthcare access	Potential CSR reporting relevance	Documented patient reach and a 50% investigation concession provide measurable service indicators.

14. Theory of Change

If community members are provided structured access to specialty consultation and a substantial concession on eligible investigations, then financial and access barriers to initial clinical assessment may be reduced, enabling more people to engage with formal healthcare services. For this event, the verified intervention inputs are the specialty medical camp and the 50% investigation discount; the verified reach is 300 patients.

INPUTS	ACTIVITIES	OUTPUTS	EARLY IMPACT PATHWAY
Medical/service setting; programme coordination	Spine & cardiology camp; patient facilitation; consultations; investigation concession	300 patients reached; 50% investigation discount	Greater opportunity to access specialty care at reduced investigation cost
Clinical personnel and hospital infrastructure	Patient assessment and onward clinical guidance	Documented patient–clinician interaction	Potential support for earlier engagement with formal healthcare services

15. Impact Scorecard

DIMENSION	MEASURE	STATUS	EVIDENCE
Reach	300 patients	Completed / reported	Event figure supplied
Specialty access	Spine + cardiology	Completed / reported	Event brief supplied
Financial access	50% investigation discount	Completed / reported	Event brief supplied
Patient engagement	Patients visibly waiting and consulting	Documented	Photographs
Service environment	Hospital-based clinical delivery	Documented	Photographs / signage

Clinical outcome tracking	Diagnosis / treatment / follow-up counts	Not quantified	Data not supplied

16. Sustainability & Follow-up

A one-day medical camp can create an access point, but sustained impact depends on appropriate follow-up after consultation. The supplied event information does not contain follow-up completion figures. For future camps, the organisation can strengthen longitudinal impact documentation by recording referrals, investigations completed, treatment advice, follow-up attendance and beneficiary feedback.

- Maintain a de-identified beneficiary register with service category and referral status.
- Record the number and type of investigations actually utilised under the 50% concession.
- Track referrals and follow-up appointments where consent and operational systems permit.
- Collect short beneficiary feedback on accessibility, affordability and usefulness of the camp.
- Repeat specialty camps based on documented community demand and referral patterns.

17. Key Achievements

- Reached 300 patients through a single specialty-focused medical camp.
- Combined spine and cardiology services within one community-health intervention.
- Provided a 50% discount on investigations, creating a clear affordability measure.
- Established a structured hospital-based patient-care environment documented through photographs.
- Created a formal record of programme delivery suitable for organisational, donor and CSR documentation.

18. Evidence Register & Data Integrity

This report has been prepared using the event facts supplied for the 18 July 2026 camp and the photographs attached to the conversation. Where quantitative or clinical detail was not supplied, it has not been invented.

CLAIM / DATA POINT	SOURCE TYPE	CONFIDENCE / NOTE
Event date: 18 July 2026	User-supplied event detail	Verified for this report
300 patients	User-supplied event detail	Reported figure; no attendance register supplied
50% investigation discount	User-supplied event detail	Reported service concession; no financial ledger supplied
Spine + cardiology focus	User-supplied event detail	Verified event description
Hospital setting / Ibn Sina Hospital, Budgam	Photographs	Visible signage / clinical environment
Patient consultation and waiting	Photographs	Direct visual evidence
Demographics, diagnoses, investigations completed, referrals	Not supplied	Not quantified in this report

19. Photo Documentation

Selected photographs supplied for the event record.

PHOTO 1

Patients waiting for consultation and registration within the hospital facility.

PHOTO 2

Clinical interaction between the medical team and a beneficiary during the camp.

PHOTO 3

Patients and attendants waiting for specialty consultation; the hospital's service environment is visible.

PHOTO 4

Camp-day coordination and patient movement through the consultation area.

PHOTO 5

Patient consultation/documentation in the hospital's dedicated consultation space.

PHOTO 6

Specialty-care area with beneficiaries awaiting/receiving clinical services.

20. Annexure – Donor/CSR Data Fields

The following fields are intentionally left open for insertion if the organisation has supporting records. They can be added without changing the narrative of the completed event.

- Exact venue address [INFORMATION REQUIRED]
- Number of doctors/medical personnel [INFORMATION REQUIRED]
- Number of volunteers/support staff [INFORMATION REQUIRED]
- Number of spine consultations [INFORMATION REQUIRED]
- Number of cardiology consultations [INFORMATION REQUIRED]
- Number/type of investigations performed [INFORMATION REQUIRED]
- Number of beneficiaries who used the 50% discount [INFORMATION REQUIRED]
- Total monetary value of discounts [INFORMATION REQUIRED]
- Number of referrals/follow-ups advised [INFORMATION REQUIRED]
- Beneficiary testimonials/quotes [INFORMATION REQUIRED]
- Media/social-media reach [INFORMATION REQUIRED]
- Total programme expenditure [INFORMATION REQUIRED]

21. Conclusion

The Free Spine & Cardiology Medical Camp conducted on 18 July 2026 represents a documented community-health intervention that reached 300 patients and incorporated a 50% investigation discount. The available photographs provide direct evidence of patient attendance, clinical interaction and delivery within the Ibn Sina Hospital environment in Budgam. The event therefore produced clear, reportable outputs in the form of beneficiary reach, specialty access and financial concession. Future reporting can strengthen the impact evidence further by capturing investigation utilisation, diagnosis/referral data, follow-up outcomes, beneficiary feedback and the monetary value of the service concession.
