BHAT FOUNDATION WELFARE SOCIETY

PROJECT COMPLETION & IMPACT REPORT

MEGA FREE MEDICAL CAMP

Free Multi-Specialty Healthcare & Community Welfare Initiative

DATE	21–22 September 2026
VENUE	Ibn Sina Hospital, Near Railway Station, Budgam

ORGANISED BY	Bhat Foundation Welfare Society
IN COLLABORATION WITH	Ibn Sina Hospital

“Care Today for a Healthier Tomorrow”

1. Executive Summary

Bhat Foundation Welfare Society, in collaboration with Ibn Sina Hospital, conducted a two-day Mega Free Medical Camp on 21–22 September 2026 at Ibn Sina Hospital, near the Railway Station in Budgam. The intervention was designed to provide accessible healthcare services and social welfare support to the general public, with particular emphasis in the event record on people from weaker and underprivileged sections of society.

The camp brought together clinical consultation and diagnostic services in a single community-oriented intervention. The documented service delivery included 700 free consultations, 150 free ultrasonography (USG) examinations and 400 laboratory tests. On the basis of the values recorded in the event report, the documented value of these three service categories was ₹4,87,500.

The documented specialist coverage included gynaecology, paediatrics, dental care, ophthalmology, orthopaedics, general medicine, physiotherapy, rheumatology, general surgery and urology. The event record also states that patients requiring further treatment or surgical intervention were identified and guided for appropriate referrals.

The accompanying photographs and event publicity material provide visual documentation of the hospital setting, patient waiting areas, community participation and the availability of the free-care initiative. The campaign poster identifies the programme as a free check-up initiative and lists general physician, gynaecology, dental and ophthalmology services, with the event scheduled from 9:00 AM to 5:00 PM.

Impact at a Glance

Indicator	Documented Result
Event duration	2 days
Free consultations	700
Free USG examinations	150
Laboratory tests	400
Documented service value	₹4,87,500
Venue	Ibn Sina Hospital, Budgam
Implementation	Bhat Foundation Welfare Society + Ibn Sina Hospital
Target group	General public

2. Project Profile

Project Element	Details
Project/Event	Mega Free Medical Camp
Implementing organisation	Bhat Foundation Welfare Society
Collaborating institution	Ibn Sina Hospital
Date	21–22 September 2026
Venue	Ibn Sina Hospital, near Railway Station, Budgam
Theme	Free healthcare services and social welfare
Target beneficiaries	General public
Camp timing	9:00 AM – 5:00 PM
Contact in event poster	9622552553
Foundation contact	9149606115
Foundation email	Bhatfoundation@gmail.com

3. Project Background & Community Need

Access to timely consultation and diagnostic investigation is an important component of community health. The event documentation frames the medical camp as a social-welfare intervention intended to make essential healthcare services accessible to the local community and to reduce the financial burden associated with consultations and diagnostic examinations.

The intervention combined clinical consultations with diagnostic services. This combination is significant at programme level because consultation provides an opportunity for clinical assessment while laboratory investigations and USG can support further examination and medical decision-making. The event record specifically identifies early detection and diagnosis as an intended and observed benefit of the free examination component.

The camp was therefore structured not merely as a consultation activity, but as an integrated access point for specialist consultation, diagnostic support, health awareness and referral guidance.

4. Problem → Need → Intervention

Stage	Documented Situation
Problem	Financial and access barriers can affect timely access to specialist consultations and diagnostic examinations.
Need	Accessible healthcare services, examinations and medical guidance for community members.
Intervention	A two-day free multi-specialty medical camp at Ibn Sina Hospital.
Service response	700 consultations, 150 USGs and 400 laboratory tests, alongside multi-specialty clinical support.
Follow-through	Patients requiring further treatment or surgical intervention were guided for appropriate referrals.

5. Project Objectives

- Provide free and accessible healthcare consultation to members of the general public.
- Facilitate access to diagnostic examinations through free USG and laboratory testing.
- Provide multi-specialty clinical support covering a broad range of healthcare needs.
- Support early identification and diagnosis through consultation and diagnostic investigation.
- Reduce the direct financial burden on patients for the documented services.
- Increase awareness regarding preventive healthcare and regular medical check-ups.
- Identify patients requiring further treatment or surgical intervention and guide them towards appropriate referral pathways.
- Strengthen community-oriented health outreach and social responsibility through institutional collaboration.

6. Target Beneficiaries & Reach

The official event report identifies the target beneficiaries as the general public. It also describes the intervention as serving local community members and specifically notes benefits for weaker sections of society. The available record provides service-volume figures rather than a verified unique-beneficiary count.

Beneficiary/Reach Category	Documented Figure / Description	Nature of Reach
General public	Target beneficiary group	Community healthcare access
Free consultation users	700 consultations	Clinical assessment and medical advice
USG service users	150 examinations	Diagnostic support
Laboratory service users	400 tests	Diagnostic investigation
Patients requiring further care	Identified during the intervention	Referral guidance

7. Healthcare Services Delivered

Service / Specialty	Documented Contribution
General Physician	General health assessment and consultation
Gynaecology	Women’s health consultation
Paediatrics	Child health consultation
Dental	Dental check-up and consultation
Ophthalmology	Eye care and examination
Orthopaedics	Musculoskeletal consultation
General Medicine	General medical assessment
Physiotherapy	Physiotherapy-related consultation/support
Rheumatology	Rheumatology consultation
General Surgery	Surgical assessment
Urology	Urological consultation
USG	150 free examinations
Laboratory	400 free tests

8. Implementation Methodology

Stage 1 — Programme Planning

The medical camp was organised as a collaborative community-health initiative between Bhat Foundation Welfare Society and Ibn Sina Hospital. The event poster and report establish the two-day schedule, venue and free-service model.

Stage 2 — Community Communication & Mobilisation

The programme was publicly communicated through the event publicity material. The campaign poster prominently communicated the free check-up nature of the initiative, date, timing, venue and service categories, supporting community awareness and participation.

Stage 3 — Clinical & Diagnostic Service Delivery

During the camp, doctors and hospital staff provided consultations and examinations. The documented service volumes demonstrate delivery across consultation, USG and laboratory-testing components.

Stage 4 — Specialist Access

The intervention provided access to multiple clinical specialties, including gynaecology, paediatrics, dental, ophthalmology, orthopaedics, general medicine, physiotherapy, rheumatology, general surgery and urology.

Stage 5 — Referral Guidance

The event report states that patients requiring further treatment or surgical intervention were identified and guided towards appropriate referrals, extending the intervention beyond the immediate camp encounter.

Stage 6 — Documentation

Implementation was documented through the event report, campaign publicity material and photographs showing the hospital environment and patient/community participation.

9. Activity Matrix

No.	Activity	Date	Location	Documented Reach	Output / Evidence
1	Free medical consultation	21–22 Sep 2026	Ibn Sina Hospital, Budgam	700 consultations	Event report
2	Free USG examinations	21–22 Sep 2026	Ibn Sina Hospital, Budgam	150 USGs	Event report
3	Free laboratory tests	21–22 Sep 2026	Ibn Sina Hospital, Budgam	400 tests	Event report
4	Multi-specialty clinical support	21–22 Sep 2026	Ibn Sina Hospital, Budgam	General public	Event report + campaign poster
5	Identification/referral of patients needing further care	21–22 Sep 2026	Ibn Sina Hospital, Budgam	Patients identified during camp	Event report

10. Output Dashboard

Indicator	Achieved	Documented Value
Consultations	700	₹2,45,000
USG examinations	150	₹82,500
Laboratory tests	400	₹60,000
Total documented service interventions	1,250	₹4,87,500
Event duration	2 days	21–22 September 2026

Indicator	Achieved	Documented Value
Specialist areas documented	11	Multi-specialty coverage

The total of 1,250 represents the sum of the three reported service categories and should be understood as service instances, not as a unique patient count. The event record separately describes the camp as serving numerous beneficiaries.

11. Documented Service Value

The event record assigns the following monetary values to services provided free of charge: ₹2,45,000 for 700 consultations, ₹82,500 for 150 USG examinations and ₹60,000 for 400 laboratory tests. Together, these documented values amount to ₹4,87,500 in healthcare services delivered without charge under the camp.

DOCUMENTED VALUE OF FREE SERVICES	₹4,87,500

12. Outcomes & Early Impact

The event report identifies several immediate outcomes associated with the intervention. These include improved access to free healthcare services for weaker sections of society, early detection and diagnosis through examinations and investigations, increased health awareness, and reduced financial burden through free specialist consultations and diagnostic services.

- Free access to clinical consultations and diagnostic services was provided through the camp.
- The combination of consultation, USG and laboratory investigations supported early detection and diagnosis.
- Patients were exposed to a broad range of specialist healthcare services within the same intervention.
- The documented free-service value indicates a direct reduction in the cost burden associated with the three quantified service categories.
- Patients requiring additional treatment or surgical intervention were identified and guided for appropriate referral.
- The programme strengthened community-oriented health outreach and the role of institutional collaboration in social responsibility.

13. Before → Intervention → Documented Result

BEFORE / NEED	INTERVENTION	DOCUMENTED RESULT
Need for accessible healthcare and consultation	Two-day free medical camp	700 free consultations
Need for accessible diagnostic investigation	Free USG and laboratory services	150 USGs + 400 laboratory tests
Financial burden associated with services	Services provided without charge	₹4,87,500 documented service value
Need for specialist access	Multi-specialty clinical support	11 specialty/service areas documented
Patients needing further care	Identification and referral guidance	Referral support documented

14. Impact Measurement Framework

Impact Area	Indicator	Achieved	Evidence
Healthcare access	Free consultations	700	Event report
Diagnostics	USG examinations	150	Event report
Diagnostics	Laboratory tests	400	Event report
Financial relief	Documented value of quantified free services	₹4,87,500	Event report calculations
Specialist access	Specialty/service areas documented	11	Event report
Referral support	Patients identified for further treatment/surgery	Documented	Event report
Community outreach	Public participation	Photographically documented	Event photographs

15. Beneficiary & Human Impact

The photographs supplied with the event documentation provide a direct visual record of community participation. The images show patients seated in hospital waiting areas, including women and families, as well as movement and service activity within the hospital. These images complement the numerical service records by documenting the real-world setting in which the intervention was delivered.

The human impact of the camp is reflected in the combination of access, affordability and clinical guidance: individuals could attend the hospital for consultations and diagnostic examinations without paying for the documented camp services, while those identified as requiring additional treatment could receive referral guidance.

16. Partnership & Stakeholder Engagement

Stakeholder	Documented Role
Bhat Foundation Welfare Society	Organising/implementing organisation and community-welfare partner
Ibn Sina Hospital	Collaborating healthcare institution; clinical and diagnostic service delivery
Doctors and hospital staff	Consultations, examinations and healthcare service delivery
Community/general public	Participation and utilisation of free healthcare services

17. Photo Documentation

The following photographs were supplied as supporting visual documentation for the Mega Free Medical Camp. Captions are based only on objectively visible content and the event information provided.

PHOTO 01 — Official Mega Free Medical Camp publicity material

The publicity material identifies the venue as Ibn Sina Hospital near the Railway Station, Budgam, announces free check-ups, lists general physician, gynaecology, dental and ophthalmology services, and gives the dates 21–22 September 2026 with camp timing of 9:00 AM–5:00 PM.

PHOTO 02 — Community participation within the hospital

The photograph visibly shows multiple community members seated in a hospital waiting area, with hospital information and healthcare signage visible in the background. It documents patient/community presence during the programme.

PHOTO 03 — Patient service environment and hospital activity

The photograph shows patients seated within a hospital corridor/waiting area, with an outpatient department sign and healthcare personnel visible. It provides visual evidence of an active hospital service environment during the intervention.

18. Resource Utilisation

Resource Category	Documented Use
Human resources	Doctors and hospital staff
Clinical infrastructure	Ibn Sina Hospital
Diagnostic facilities	USG and laboratory testing facilities
Community communication	Campaign/publicity material
Documentation	Event report and photographs
Referral support	Guidance for patients requiring further treatment/surgical intervention

19. Monitoring & Documentation

The intervention is supported by a combination of narrative, quantitative and photographic documentation. The event report records the event identity, dates, venue, organising collaboration, objective, beneficiary group, service volumes, service values, outcomes and conclusion. The photographs provide additional visual evidence of the programme environment and participation.

Evidence No.	Evidence Type	What it Documents
E-01	Event report	Event details, objective, service volumes, outcomes and conclusion
E-02	Official campaign poster	Dates, venue, free-care messaging, service categories and timing
E-03	Photograph	Community/patient presence in hospital waiting area
E-04	Photograph	Hospital service environment and patient activity
E-05	Service figures	700 consultations, 150 USGs, 400 laboratory tests
E-06	Documented service values	₹2,45,000 + ₹82,500 + ₹60,000 = ₹4,87,500

20. Financial / Resource Value Summary

Service Head	Quantity	Documented Value	Documented Value per Service*
Free consultation	700	₹2,45,000	₹350
Free USG	150	₹82,500	₹550
Laboratory tests	400	₹60,000	₹150
TOTAL	1,250 service instances	₹4,87,500	—

*The per-service figures above are arithmetic calculations from the values stated in the event report; they are not additional claims about the hospital's standard pricing.

21. Cost-Effectiveness / Service Value

Based on the documented service values, the intervention delivered ₹4,87,500 worth of the three quantified service categories free of charge. Because the event record does not provide a verified total programme expenditure or a unique beneficiary count, a formal cost-per-beneficiary or return-on-investment calculation is not included. The quantified service-value calculation is nevertheless a clear measure of the direct healthcare value recorded for the camp.

22. SDG Alignment

SDG	Relevant Area	Project Contribution
SDG 3 — Good Health and Well-being	Access to healthcare	Free consultations, diagnostic examinations, specialist services and referral guidance.
SDG 10 — Reduced Inequalities	Equitable access	Free healthcare services targeted at the general public and described as particularly beneficial to weaker sections.
SDG 17 — Partnerships for the Goals	Institutional collaboration	Joint implementation by Bhat Foundation Welfare Society and Ibn Sina Hospital.

23. Key Achievements

- Conducted a two-day Mega Free Medical Camp on 21–22 September 2026 at Ibn Sina Hospital, Budgam.
- Delivered 700 free consultations.
- Conducted 150 free USG examinations.
- Conducted 400 free laboratory tests.
- Recorded ₹4,87,500 in quantified free-service value across the three reported service categories.
- Provided access to a broad multi-specialty service portfolio.
- Identified patients requiring further treatment or surgical intervention and provided referral guidance.
- Documented the intervention through an event report, publicity material and photographs.

24. Impact Scorecard

Category	Status	Basis
Reach	Verified	700 consultations + 150 USGs + 400 laboratory tests documented
Participation	Verified	Patient/community presence documented through photographs
Activities	Verified	Consultation, USG, laboratory testing and specialist support documented
Outputs	Verified	Quantified service delivery recorded
Community engagement	Verified	General-public target and photographic documentation
Partnerships	Verified	Bhat Foundation Welfare Society + Ibn Sina Hospital
Documentation	Verified	Event report + publicity material + photographs
Follow-up	Verified	Referral guidance documented for patients needing further care

25. Theory of Change

Level	Programme Logic
INPUTS	Foundation-led community outreach, hospital collaboration, doctors/staff, hospital infrastructure and diagnostic facilities.
ACTIVITIES	Free consultations, specialist consultations, USG examinations, laboratory testing, health guidance and referrals.
OUTPUTS	700 consultations, 150 USGs, 400 laboratory tests and documented multi-specialty access.
SHORT-TERM OUTCOMES	Improved access to healthcare, reduced direct service costs, diagnostic support, increased health awareness and referral guidance.
LONGER-TERM CONTRIBUTION	Continued community access to preventive and diagnostic healthcare can contribute to stronger health-seeking behaviour and community well-being.

26. Donor / CSR Value Proposition

The medical camp demonstrates a practical community-health delivery model built around institutional collaboration and direct service provision. The documented outputs provide a clear basis for assessing the scale of the intervention: 700 consultations, 150 USG examinations and 400 laboratory tests, with ₹4,87,500 in quantified free-service value. The programme also demonstrates the ability to combine specialist access, diagnostics and referral guidance within a single community-facing intervention.

For future donor or CSR engagement, the documented model provides a clear framework for supporting healthcare outreach through clinical partnerships, diagnostic access, community mobilisation and evidence-based reporting.

27. Sustainability & Follow-Up

The event record documents referral guidance for patients requiring further treatment or surgical intervention, establishing a direct follow-up pathway from the camp to subsequent healthcare. The intervention also provides a model for continued community-health outreach through collaboration between a social-welfare organisation and a healthcare institution.

Future iterations can build on the same structure by maintaining community mobilisation, specialist participation, diagnostic access, referral coordination and systematic documentation of beneficiaries and outcomes.

28. Future Programme Development

Time Horizon	Recommended Programme Development
Immediate	Maintain referral follow-up for patients identified during the camp and preserve service documentation.
3–6 months	Conduct additional community medical outreach with continued specialist and diagnostic support.
6–12 months	Develop a recurring community-health outreach calendar and strengthen outcome tracking across repeated camps.

29. Conclusion

The Mega Free Medical Camp conducted on 21–22 September 2026 at Ibn Sina Hospital, Budgam, represents a documented community-health intervention implemented by Bhat Foundation Welfare Society in collaboration with Ibn Sina Hospital. The programme combined free clinical consultation, diagnostic investigation, specialist access and referral guidance within a two-day outreach model.

The quantified service record demonstrates 700 free consultations, 150 free USG examinations and 400 laboratory tests. These services carry a documented combined value of ₹4,87,500. Beyond the quantified outputs, the event record documents specialist coverage across multiple healthcare areas, early diagnostic support, health awareness and identification of patients requiring further treatment.

The accompanying photographs strengthen the work record by visually documenting community participation and the hospital-based service environment. Together, the quantitative and visual evidence establish a clear record of healthcare services delivered through the collaborative intervention.

30. FINAL DONOR SNAPSHOT

Field	Snapshot
PROJECT	Mega Free Medical Camp
DATE	21–22 September 2026
LOCATION	Ibn Sina Hospital, near Railway Station, Budgam
IMPLEMENTER	Bhat Foundation Welfare Society
HEALTHCARE PARTNER	Ibn Sina Hospital
DIRECT SERVICE REACH	700 consultations + 150 USGs + 400 laboratory tests
TOTAL SERVICE INSTANCES	1,250
DOCUMENTED FREE-SERVICE VALUE	₹4,87,500
SPECIALTY COVERAGE	Multi-specialty clinical services
KEY OUTCOME	Improved access to free healthcare, diagnostic support and referral guidance
EVIDENCE	Event report, campaign poster and photographs
FOLLOW-UP	Referral guidance for patients requiring further treatment/surgical intervention

Why This Intervention Matters

The Mega Free Medical Camp matters because it converted a community-health need into direct, accessible service delivery. Over two days, the intervention documented 700 free consultations, 150 USG examinations and 400 laboratory tests, representing ₹4,87,500 in quantified free-service value. The programme also brought multiple specialties and diagnostic facilities into one coordinated healthcare outreach setting. The event record indicates that the intervention supported early detection and diagnosis, reduced direct financial burden on patients and enabled referral guidance for people requiring further treatment. The accompanying photographs provide a visual record of patient and community participation within the hospital environment. The collaboration between Bhat Foundation Welfare Society and Ibn Sina Hospital demonstrates how community organisations and healthcare institutions can combine local outreach with clinical infrastructure to improve access to essential health services.

31. Annexure Index

Annexure	Document / Evidence
Annexure I	Event Report — Mega Free Medical Camp
Annexure II	Official Mega Free Medical Camp Publicity Poster
Annexure III	Photographic Documentation — Community Waiting Area
Annexure IV	Photographic Documentation — Hospital Service Environment
Annexure V	Service Output Summary — Consultations, USG and Laboratory Tests

32. Source & Record Note

This report has been prepared from the event report supplied by Bhat Foundation Welfare Society and the photographic/publicity material supplied for the same intervention. Quantitative totals and service values reproduce the figures stated in the source event record. Arithmetic totals and per-service calculations are derived directly from those supplied figures. Photographic captions describe only visible, objectively identifiable elements.

ANNEXURE — PHOTOGRAPHIC DOCUMENTATION

Mega Free Medical Camp • 21–22 September 2026 • Ibn Sina Hospital, Budgam

Visual Evidence Summary

- The supplied campaign creatives document the collaboration between Bhat Foundation Welfare Society and Ibn Sina Hospital, the free medical camp format, dates, timings and venue information.
- The supplied photographs document patient/community presence, waiting areas, clinical service environments and hospital activity associated with the camp.
- The photographs are incorporated as supporting visual documentation alongside the quantitative service record in the main report.
