1. Executive Summary

Bhat Foundation Welfare Society, in collaboration with Ibn Sina Hospital, organised a Free Medical Camp on 02 May 2026 at Hamdaniya Colony, Bemina. The documented objective was to provide free healthcare services and social welfare support to the general public.

The event report records 320 patients receiving free consultation. A team of doctors and healthcare staff provided check-ups, consultations and examinations. The source report further records reported outcomes including early identification and diagnosis, increased health awareness, reduced financial burden through free specialist consultation, and guidance for patients requiring further treatment or surgical intervention.

2. Project Background

The intervention was designed as a community-level healthcare outreach activity. The event documentation states that the camp provided essential healthcare services to the local community through medical check-ups, consultations and examinations.

3. Problem Statement

The intervention addressed the need for accessible medical consultation and examination at community level. The event report specifically identifies free healthcare access and social welfare as the objective.

4. Project Objectives

1. Provide free medical consultation to community members.
2. Facilitate access to medical examination and healthcare guidance.
3. Support early identification of health concerns.
4. Reduce the immediate financial burden associated with consultation.
5. Increase awareness of preventive healthcare and regular check-ups.
6. Guide patients requiring further care toward appropriate referrals.

5. Target Beneficiaries

The event report identifies the target beneficiaries as the general public. A demographic breakdown by age, gender or vulnerability status was not provided and has therefore not been fabricated.

6. Geographic Coverage

Reported venue: Hamdaniya Colony, Bemina. The available event documentation does not provide a more detailed beneficiary catchment-area breakdown.

7. Implementation Methodology

Planning and coordination → collaboration with Ibn Sina Hospital ← deployment of doctors and healthcare staff → community medical camp→ consultation and examination → healthcare guidance/referral → photographic documentation.

8. Activities Conducted

The documented activities included medical check-ups, consultations and free examinations. The event report records 320 free consultations.

9. Activity Matrix

11. Outcomes and Early Impact

The following are reported outcomes in the supplied event documentation and are not presented as independently measured long-term health outcomes:

- Free and accessible healthcare consultation was provided to 320 documented patients.
- The report states that examinations supported early detection and diagnosis.
- The report states that the intervention increased health awareness.
- The report states that free specialist consultation reduced financial burden.
- Patients requiring further treatment or surgical intervention were reportedly guided toward appropriate referrals.

12. Impact Measurement Framework

Impact Area	Indicator	Achieved	Evidence
Healthcare access	Patients receiving free consultation	320	Event report
Medical outreach	Number of camps	1	Event report
Screening	Examinations conducted	Yes; count not provided	Event report
Referral	Patients requiring further		

Long-term health impact	Not quantified	Event report
Follow-up health outcome	Not documented	Data unavailable

13. Beneficiary Stories & Testimonials

No verified individual beneficiary story or testimonial was supplied. No quotation has been invented for this report.

[INSERT VERIFIED BENEFICIARY STORY/TESTIMONIAL IF AVAILABLE]

14. Partnerships & Stakeholder Engagement

Stakeholder	Documented Contribution
Bhat Foundation Welfare Society	Event organiser and community outreach
Ibn Sina Hospital	Healthcare collaboration
Doctors and healthcare staff	Consultation, check-up and examination services
Community members	Beneficiaries/participants

15. Resource Utilisation

Documented resources include doctors/medical personnel, healthcare staff, consultation arrangements and community-level event infrastructure. Specific quantities and financial values were not supplied.

Financial expenditure: [INFORMATION REQUIRED]

Volunteer count/hours: [INFORMATION REQUIRED]

Medical supplies/equipment quantities: [INFORMATION REQUIRED]

16. Budget Utilisation & Cost-Effectiveness

No approved budget or actual expenditure statement was supplied. Accordingly, no expenditure or cost-per-beneficiary figure has been fabricated.

Metric

Total documented project cost	
Cost per patient	
Actual expenditure by head	

Result

17. Monitoring & Evidence Register

Evidence	Available	What it verifies
Event report	Yes	Date, venue, organiser, partner, 320 consultations and reported outcomes
Photographs	Yes	
Attendance/patient register	Not supplied	
Referral register	Not supplied	
Bills/invoices	Not supplied	
Media/social analytics	Not supplied	

18. Photo Documentation

Visual evidence of medical consultation and community participation

Would verify beneficiary-level records

Would quantify follow-up/referral cases

Would verify financial utilisation Would verify digital/media reach

Photo 1 - Community medical camp setup with a doctor at the consultation desk and community/event participants.

Photo 2 Healthcare consultation taking place as part of the medical outreach activity.

Photo 3- Community members and healthcare/event personnel present during the medical camp.

19. SDG Alignment

SDG	Alignment	Evidence
SDG 3 Good Health and Well-Being	Free community medical consultation, examination and health guidance Reducing immediate financial barriers to consultation	320 free consultations documented
SDG 10 Reduced Inequalities		Free consultation documented

20. Challenges, Lessons & Follow-Up

Specific operational challenges were not documented in the supplied event report.

Key documentation lesson: future camps should maintain standardised patient registration, demographic records, referral tracking, beneficiary feedback and expenditure records.

Follow-up outcome data: [INFORMATION REQUIRED].

21. Before → Intervention → After

Stage	Documented Position
BEFORE	Community members required access to medical consultation and healthcare guidance.
INTERVENTION	Bhat Foundation Welfare Society and Ibn Sina Hospital conducted a free medical camp with consultation, check-up and examination services.
AFTER	320 free consultations were documented; the event report additionally records reported early identification, health awareness, financial relief and referral guidance.

22. Theory of Change

INPUTS → Healthcare partnership, medical personnel, community venue and organisational coordination

ACTIVITIES → Medical consultation, examination, health guidance and referral guidance

OUTPUTS → 1 medical camp; 320 documented free consultations

SHORT-TERM OUTCOMES →→ Improved access to consultation and potential early identification of health concerns

LONG-TERM IMPACT → Intended contribution to improved community access to healthcare; not independently measured in the supplied evidence.

23. Donor / CSR Value Proposition

The documented intervention demonstrates a community-level healthcare outreach model combining local organisational coordination with healthcare-sector collaboration. The principal verified service-delivery indicator is 320 free consultations. Future donor-supported camps can strengthen accountability through

beneficiary-level monitoring, referral tracking, patient feedback and transparent expenditure reporting.

24. Future Recommendations

.

Maintain a standard patient registration and attendance system.

Track referrals and, where appropriate and consented, referral completion.

Collect anonymous beneficiary feedback after consultations.

Maintain a complete expenditure statement by budget head.

Preserve original photographs and supporting documents with dates and activity references.

Aggregate verified results across future camps without double-counting beneficiaries.

25. Conclusion

The Free Medical Camp conducted on 02 May 2026 at Hamdaniya Colony, Bemina provided a documented community healthcare outreach intervention. The event report records 320 patients receiving free consultation and describes check-ups, examinations and healthcare guidance. It also reports early identification/diagnosis, health awareness, reduced consultation-related financial burden and referral guidance as immediate outcomes. The available photographs provide supporting visual evidence of the medical camp. Further follow-up and financial records would strengthen measurement of longer-term impact and cost-effectiveness.

Key output	320 free consultations
Key reported outcomes	Early identification/diagnosis, awareness, financial relief, referral guidance
Total documented cost	[INFORMATION REQUIRED]
Partners	Ibn Sina Hospital
Evidence	Event report + photographs [INFORMATION REQUIRED]
Follow-up	

Why This Intervention Matters

The intervention created a direct community-level access point for healthcare consultation and examination. Its strongest verified numerical result is 320 free consultations. The activity also demonstrates collaboration between a community welfare organisation and a healthcare institution, with doctors and healthcare staff

providing direct services. The event documentation reports additional benefits including early identification of health concerns, increased health awareness, reduced consultation-related financial burden and referral guidance. Stronger post-camp tracking would allow the Foundation to demonstrate treatment continuity, longer-term outcomes and cost-effectiveness in future reporting.

Data Integrity Note

This report deliberately does not use fabricated beneficiary, volunteer, budget, referral or outcome figures. The only numerical beneficiary figure used as an achieved result is the documented 320 free consultations. Any additional figures should be inserted only after verification from attendance sheets, registers, financial records or other primary evidence.
